Source:

https://gist.githubusercontent.com/hoannc54/b8a0c8496f4e032788a3f7359fc68759/raw/85912903896a067862263b887c128a9255c2dcfb/auth_layout.blade.php

Tạo register.blade.php

Source:

<https://gist.githubusercontent.com/hoannc54/b8a0c8496f4e032788a3f7359fc68759/raw/85912903896a067862263b887c128a9255c2dcfb/register.blade.php>

Tạo Route

```
1 Route::prefix('/')
2     ->namespace('Auth')
3     ->name('auth.')->group(function(){
4         Route::get('/register', 'RegisteredUserController@create')
5             ->middleware('guest')
6             ->name('register');
7     });
```

2. Xây dựng hàm lưu user mới

Tạo Route

```
1 Route::prefix('/')
2     ->namespace('Auth')
3     ->name('auth.')->group(function(){
4         Route::post('/register', 'RegisteredUserController@store')
5             ->middleware('guest');
6     });
```

Tạo hàm store:

```
1     use Illuminate\Validation\Rules;
2     use Illuminate\Support\Facades\Hash;
3
4     public function store(Request $request)
5     {
6         $request->validate([
7             'name' => ['required', 'string', 'max:255'],
8             'email' => ['required', 'string', 'email', 'max:255', 'unique:users'],
9             'password' => ['required', 'confirmed', Rules\Password::defaults()],
10        ]);
11
12        $user = User::create([
13            'name' => $request->name,
14            'email' => $request->email,
15            'password' => Hash::make($request->password),
16        ]);
17
18
19
20        return redirect('backend/dashboard');
21    }
```
